- 0.01 lux low light capability
- Built in microphone
- 12v DC / 24v AC dual power input
- 2.3" (w) x 2" (h) x 4.6" (l)
- 5 year warranty

## Four Camera Interview System

This interview system pairs our top selling PC33C-4G surveillance camera and our newest audio/video digital recorder with an advanced processor - designed with the critical needs of law enforcement in mind.

Most digital recorders place audio second in line when processing power is rationed out which produces more questions than evidence. This recorder provides excellent 30 FPS real-time frame rate and 704 x 480 resolution recording on all four channels along with crisp, synchronized audio recording. Recorder operation of this recorder is extremely intuitive with an icon based GUI menu. Exporting video and audio is a synch as users simply select which channel to export, select time range and off load with a simple click. Footage can either be the original data files for evidence validation or Windows compatible files which can be saved to USB drives, CD using the built-in burner or via a remotely connected computer. System is capable of simultaneous export, review and recording on all four channels, allowing multiple interviews without interruption.
